Frank's Story

Frank Lisciandro was born in New Jersey in 1951. He was a healthy and active child, and he loved playing sports. But in his early 20s, Frank began to experience chest pain. At first, he ignored the pain, but it eventually became so severe that he could no longer ignore it.

In 1985, Frank was diagnosed with cardiomyopathy, a disease that weakens the heart muscle. Frank's doctors told him that he would need a heart transplant, but he was not a good candidate for surgery. Frank was too old, and he had too many other health problems.

Frank was devastated. He was only 34 years old, and he had two young children. He didn't want to die, but he didn't know what else he could do.

In 2001, Frank's doctors told him about a new experimental surgery that could give him a new heart. The surgery was called "ex vivo heart transplantation." In this surgery, the patient's heart is removed and replaced with a new, artificial heart.

Frank knew that the surgery was risky, but he was willing to try anything. He agreed to participate in the clinical trial, and in November 2001, he underwent the groundbreaking surgery.

The surgery was a success, and Frank became the first man to live without a heart. He spent the next several months recovering in the hospital, and he eventually returned home to his family.

Frank's story is an inspiration to anyone who has ever faced adversity. It is a reminder that anything is possible if you never give up.
