Cancer immunotherapy is a rapidly evolving field that has revolutionized the treatment of cancer. This comprehensive guide provides a thorough overview of the latest research, clinical trials, and practical applications of oncoimmunology.

Understanding Cancer Immunotherapy

Cancer immunotherapy is a type of cancer treatment that uses the body's own immune system to fight cancer. Unlike traditional cancer treatments, such as chemotherapy and radiation therapy, which directly target cancer cells, cancer immunotherapy helps the immune system recognize and destroy cancer cells.

There are a number of different types of cancer immunotherapy, including:

- Immune checkpoint inhibitors
- Adoptive cell therapy
- Cancer vaccines
- Oncolytic viruses

Oncoimmunology Practical Guide For Cancer Immunotherapy
